PREFACE.

A few words of explanation are necessary as to the system of arrangement which has been adopted in the present volume of the Catalogue.

It has been found that, in nearly all cases, the autonomous coins of the various cities could be classed under three or more Periods, such as, Before and After Alexander the Great, Before and During the Period of Roman Dominion. The coins of Thrace, in some instances, and of Thasos, have been attributed with greater minuteness to the centuries to which, from considerations of history or style, they appear to belong.

The standards of weight according to which the gold and silver money of each class was issued, have been added wherever it has been found practicable. The nomenclature of the weight-standards is that of the late Dr. J. Brandis, occasionally modified to suit the requirements of the English language.

The coins of Lysimachus have been reserved for the volumes describing the coinage of the successors of Alexander.

The Appendix consists wholly of coins forming part of the munificent gift of the Governor and Company of the Bank of

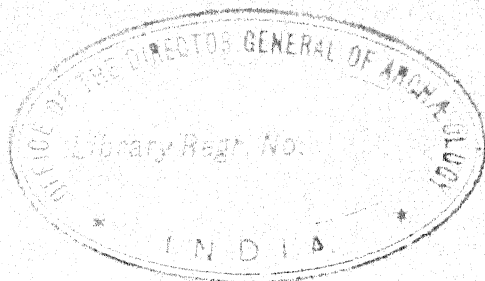

England, the presentation having been made too recently for the coins to be described in their proper places.

The metal of each coin and its size is stated in inches and tenths. The weight is given in English grains of all gold and silver coins. Tables for converting grains into grammes, and inches into millimètres, as well as into the measures of Mionnet's Scale, are placed at the end of the volume (pp. 272 *sqq.*).
